DETAILED ACTION

1. This Office Action is the answer to the communication filed on February 9, 2001, which paper has been placed of record in the file.
2. Claims 1-28 are pending in this application.

Claim Rejections - 35 USC § 101

3. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

4. Claims 1-28 are rejected under 35 U.S.C 101 because the claimed invention is directed to non-statutory subject matter.

The claims, as presently claimed and best understood were reconsidered in light of the "Examination Guidelines for Computer-Related Inventions" and were found to be non-statutory. Discussion of the analysis of the claims under the guidelines follows.

As to claims 1-28, the claimed invention is not implemented on a specific apparatus, therefore, the invention is not directed to the technological arts. To be statutory, the utility of an invention must be within the technological arts. The definition of "technology" is the "application of science and engineering to the development of machines and procedures in order to enhance or improve human conditions, or at least to improve human efficiency in some respect." (Computer Dictionary 384 (Microsoft Press, 2d ed. 1994)). When one looks to the present specification to determine what the applicant has invented, the invention appears to be implemented on the computer.

Thus, it is clear that the claimed invention are intended to be directed to the abstract method apart from the apparatus for performing the method.

Therefore, claims 1-28 are non-statutory, because they are directed solely to the abstract method apart from the apparatus without practical application in the technological arts.

Conclusion

5. Claims 1-28 are rejected.

6. The prior arts made of record and not relied upon is considered pertinent to applicant's disclosure:

Wallman (US 6,601,044) discloses a computer-based system for creating a portfolio of assets and executing trades in the assets to modify the portfolio.

Rebane (US 6,078,904) discloses a computer system and method for optimally allocating investment funds of an investor in a portfolio having a plurality of investments.

O'Shaughnessy (US 6,484,151) discloses system and method for selecting and purchasing stocks via a global computer network.
